

# **ANNUAL OSPREY REPORT 2018 Survey Year**

**submitted to  
The California Department of Fish and Wildlife  
by  
Green Diamond Resource Company**

**March 7, 2019**

## Introduction

In 2006, Green Diamond Resource Company (GDRCo) and the California Department of Fish and Wildlife (DFW) developed and began implementing an ownership-wide osprey consultation protocol for timber harvest plans (THPs).

In accordance with this consultation protocol, between March 15<sup>th</sup> and August 15<sup>th</sup>, GDRCo biologists conduct searches and status checks for historic and active osprey nests occurring within 0.25 mile of ground-based operations and 0.5 mile of helicopter-based operations expected to be active during the critical period for osprey. The critical period is March 1<sup>st</sup> to April 15<sup>th</sup> and extends to August 15<sup>th</sup> for occupied nests. Nest status need not be determined if ground-based operations within 0.25 mile of the nest or helicopter-based operations within 0.5 mile of the nest occur outside the critical period. If timber harvest operations commence between August 15<sup>th</sup> and September 1<sup>st</sup>, then a check for late-season occupancy of the nest is required. This check ensures that unfledged chicks are not present at the nest.

The ownership-wide consultation allows operations within 0.25 mile (but not within 500 feet) of occupied nests during the breeding season so long as operations occur as late in the breeding season as operationally feasible and encroach upon the 0.25 mile disturbance buffer and nest gradually. If operations are to occur within the 0.25 mile disturbance buffer during the breeding season, the nest must be monitored to determine if operations are adversely affecting the nesting osprey or their young.

This report summarizes the survey results for osprey nests covered by the consultation during 2018. An occupied nest is defined as a nest or nest tree used by an osprey pair during the current nesting season. An active nest is defined as a nest or nest tree used at least once during the three most recent nesting seasons. A tree may be considered an active nest tree even if it has lost all or a portion of its stick nest, provided that suitable substrate for rebuilding the nest remains. A historic nest is defined as a nest or nest tree used at some time in the past but is not currently occupied or active.

## Summary of Results

Sixty-three individual historic or active nests or nest trees were surveyed a total of 154 times in 2018 (Figure 1). Of the 63 nests surveyed, 14 nests were occupied, 34 were unoccupied, and 15 did not have sufficient data to determine occupancy status (Figure 2). Reproduction was confirmed at two of the 14 occupied sites (Table 1). However, surveys to confirm reproduction are only required when operations are planned within 0.25 mile of an occupied nest during the critical period. Therefore, reproductive surveys were not conducted at all occupied sites, and no inferences should be made regarding osprey productivity in 2018.

No helicopter-based THP operations occurred within 0.5 mile of historic or active osprey nests during the 2018 critical period. Three ground-based THPs with operations during the critical period occurred within 0.25 mile of 5 historic or active osprey nests (Table 2). Of the 5 THP-associated nest sites, all were determined to be unoccupied (Figure 2). No operations occurred within 0.25 mile of osprey nests where occupancy could not be determined. Refer to Table 2 for a complete summary of the status of the 2018 osprey nests and THP associations and Map 1 for the location of the nests and THP unit boundaries.

## Timing of Osprey Surveys (n=154)

Figure 1: Timing of surveys conducted during the 2018 osprey critical period

## Occupancy Status of 2018 Osprey Nests (n=63)

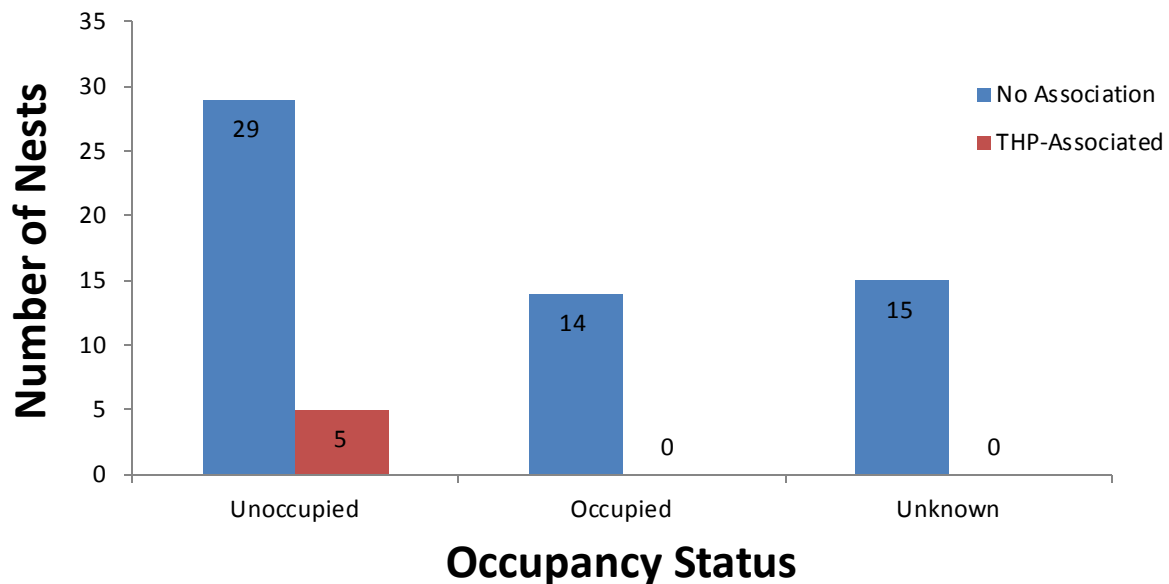

Figure 2: Occupancy status of osprey nests surveyed in 2018

**Table 1.** 2018 occupied sites with survey results confirming reproduction

Site Name	THP	Occupancy Status	Survey Results
Jac #28	None	Occupied	5/9/18: Adult seen incubating on nest. Second adult seen exchanging calls and prey. 6/15/18: Adult seen feeding two nestlings. 7/13/18: Two adults and one juvenile observed.
M200 #4	None	Occupied	7/14/18: Osprey observed at nest with two fledglings
